DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 are drawn to a circuit board processing system, classified in class 29, subclass 825.
- II. Claims 11-20 and 32-34 are drawn to a method of processing a circuit board, classified in class 228, subclass 254.
- III. Claims 21-25 are drawn to a circuit board, classified in class 174, subclass 255.
- IV. Claims 26-28 are drawn to a stencil assembly, classified in class 427, subclass 461.
- V. Claims 29-31 are drawn to a circuit board module, classified in class 174, subclass 255.
- VI. Claims 35-38 are drawn to a circuit board processing system, classified in class 174, subclass 255.

Inventions I, II, III, V, VI are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by drilling the substrate and bonding manually .

Inventions III, IV, and VI are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus

as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the product can be made bonding the layers using solder and a solder torch.

Inventions I, II, IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced by hand.

**IF APPLICANT ELECTS GROUP II, THEN APPLICANT MUST ADDITIONALLY
ELECT ONE OF THE FOLLOWING:**

This application contains claims directed to the following patentably distinct species of the claimed invention:

- Ia. Claims 12, 33, and 34 are drawn to the lead free solder.
- Ib. Claims 15-18 are drawn to vapor deposition.
- Ic. Claim 14 is drawn to the flow of fluid over the pad.
- Id. Claim 19 is drawn to the washing station.
- Ie. Claim 20 is drawn to a protective coating.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 11,13, and 32 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
